<sup>1</sup> The quantities listed above were derived by taking 1/10th of the most restrictive ALI listed in table 1, columns 1 and 2, of appendix B, RHA 3.53 of this part, rounding to the nearest factor of 10, and arbitrarily constraining the values listed between 0.001 and 1,000  $\mu\text{Ci}$ .

Values of 100  $\Phi\text{Ci}$  have been assigned for radionuclides having a radioactive half-life in excess of  $10^9$  years (except rhenium, 1000  $\mu\text{Ci}$ ) to take into account their low specific activity.

Note: For purposes of RHA 3.22.5, RHA 3.25.1, and RHA 3.44.1 where there is involved a combination of radionuclides in known amounts, the limit for the combination should be derived as follows: determine, for each radionuclide in the combination, the ratio between the quantity present in the combination and the limit otherwise established for the specific radionuclide when not in combination. The sum of such ratios for all radionuclides in the combination may not exceed "1" (i.e., "unity").
